- Express deliveries
- Bonded deliveries
- Control Tower Solutions
- Customs brokerage
- Supply Chain Design and Improvement

DELIVERING PRODUCT INTEGRITY

CERTIFIED AND COMPLIANT SERVICE

Quality and safety first
We know the immense responsibility associated with transporting goods for medical treatment. That is why we operate under a quality management system certified according to ISO 9001 and ISO 14001. All of our processes are set up to meet the standards of the new EU GDP guidelines (change control, risk management, exception management and CAPA handling) to safeguard the integrity of your goods during the entire transport chain.

DEDICATED EXPERTS

Always at your service
DHL Freight has established a dedicated Life Science Competence Center in Belgium. Here, we combined all our know-how for this market sector in a team handling all shipments within the DHL Freight Coldchain network. Customers benefit from deep expertise and high efficiency, as well as a single point of contact for all enquiries.

EXCELLENT INFRASTRUCTURE

Temperature controlled network
Throughout Europe, a fleet of refrigerated trucks is at your disposal at any time. These ensure that sensitive goods are treated in compliance with the new EU GDP guidelines. During the journey, the temperature is measured continuously, transmitted via GPS and made available online. Our state-of-the-art IT tools allow you to track the status and temperature of all shipments at every stage of the journey. All warehouses and cross docking stations are GDP compliant, specifically equipped to guarantee continuous temperature control.
